Not a likely route of exposure as a cartridge
Not normally a hazard due to physical form of product.

Inhaled:

Not normally a hazard due to physical form of product.
When the product is fired, a small amount of particles may be generated which may be slightly irritating to the respiratory tract and may be harmful.

X. TOXICOLOGY AND HEALTH INFORMATION

Routes of Absorption:

This physical nature of this product makes absorption from any route unlikely.
A small amount of inhalable particles may be created when cartridge is fired.

Warning Statement and Warning Properties:

Bluepoint Fasteners

Particles from firing may be harmful if inhaled.

Human Threshold Response Data:

ODOUR THRESHOLD	No data
IRRITATION THRESHOLD	No data
IMMEDIATELY DANGEROUS TO LIFE OR HEALTH	The IDLH concentration has not been established for this product

Signs, Symptoms and Effects of Exposure

Inhalation:

Acute	If Inhalation of the propellant is irritating to the nose, mouth, throat and lungs. Dilation of blood vessels with drop in blood pressure and headache, cyanosis and mental confusion may result from the nitroglycerin. The headache may be severe and can remain for a few hours to several days. It typically starts at the forehead preceded by a sensation of warmth and fullness in the head and may extend to the back of the neck. Nausea, vomiting and abdominal pain may also occur.
Chronic	No additional effects are known or have been reported except for those described for acute inhalation exposure. This product is composed of a finished cartridge, and the propellant is completely sealed. It is judged that the physical nature of the product, the low percentage of propellant in the product and its use would preclude inhalation of a sufficient amount of propellant and the development of these acute and/or chronic symptoms.

Skin:

Acute	Dermal exposure to the propellant may cause irritation which would subside rapidly upon removal of material without permanent damage. Additional effects would be similar to those described for acute inhalation exposure.
Chronic	No additional effects are known or have been reported except for those described for acute inhalation exposure. This product is composed of a finished cartridge, and the propellant is completely sealed. It is judged that the physical nature of the product, the low percentage of propellant in the product and its use would preclude inhalation of a sufficient amount of propellant and the development of these acute and/or chronic symptoms.

Eye:

Irritation may occur with inflammation of the conjunctiva, result in permanent impairment of vision. It is judged that this effect would not occur because of the physical nature of the product, and low percentage of propellant in the product and its use

Ingestion:

Acute	Irritation to the gastrointestinal tract. Additional effects would be similar to those described for acute inhalation exposure.
Chronic	No additional effects are known or have been reported except for those described for acute inhalation exposure. It is judged that the physical nature of the product, the low percentage of propellant in the product,

Bluepoint Fasteners

and its use would preclude ingestion and the development of these acute and/or chronic symptoms.

Medical Conditions Aggravated by Exposure:

None known or reported.

Interactions With Other Chemicals Which Enhance Toxicity:

None known or reported.

Animal Toxicology

Acute Toxicology:

Inhalation LC 50	No data
Dermal LD 50	No data
Oral LD 50	No data
Irritation	Not an irritant skin or eyes as a cartridge.

Acute Target Organ Toxicity:

Nitroglycerin will produce dilation of blood vessels and drop in blood pressure which may affect the heart. It has also been shown to cause methemoglobinemia (cyanosis). It is judged that the low concentration of nitrocellulose and nitroglycerin and the physical nature of the product would preclude the occurrence of these symptoms from exposure to this product.

Chronic Target Organ Toxicity:

There are no known or reported effects from repeated exposure to this product.

Reproductive and Development Toxicity:

There are no known or reported effects on reproductive function or fetal development.

Carcinogenicity:

This product is not known or reported to be carcinogenic by any reference source including IARC, OSHA, NTP or EPA. Lead is classified as a carcinogen by IARC and EPA. Based on the physical nature of the product and its use, it is judged that the risk of cancer is not significant from exposure to the product.

Mutagenicity:

This product is not known or reported to be mutagenic.

Aquatic Toxicology:

No data for product. Individual components are as follows: Nitrocellulose: Fish are unaffected by nitrocellulose at concentrations of 1000 mg/l.

XIII ECOLOGICAL INFORMATION

ECOTOXICITY: No data is available on this product. Individual constituents are as follows:

Copper: The toxicity of copper to aquatic organisms varies significantly not only with the species, but also with the physical and chemical characteristics of the water, such as its temperature, hardness, turbidity and carbon dioxide content. Copper concentration varying from 0.1 to 1.0 mg/l have been found by various investigators to be not toxic for most fish. However, concentrations of 0.015 to 3.0 mg/l have been reported as toxic, particularly in soft water to many kinds of fish, crustacea, mollusks, insects, and plankton.

Lead: LC 50 (48 hrs.) to bluegill (*Lepomis macrochirus*) is reported to be 2-5 mg/l. Lead is toxic to waterfowl.

Nitrocellulose: LC50 > 1000 mg/l (fish, invertebrates, algae)

Zinc: The following concentrations of zinc have been reported as lethal to fish:

Rainbow trout fingerlings: 0.13 mg/l, 12 " 24 hours

Bluegill sunfish: 6 hr TLM = 1.9 " 3.6 mg/l (soft water, 30°C)

Rainbow trout: 4 mg/l (hard water) 3 days

Sticklebacks: 1 mg/l (soft water) 24 hrs

The presence of copper appears to have a synergistic effect on the toxicity of zinc towards fish.

MOBILITY: Dissolved lead from degraded bullets may migrate through soil.
